Including an arcgis sdlic file. Once authorized, the license will display here. The business analyst will now be able to use this version of the Desktop map document on Business Analyst workspace. Applying an ArcGIS data license. This data license will allow Business Analyst to update the map document for use on Author workflows. Once you apply the data license to the map document, it is available in the ArcGIS catalog. The business analyst is also able to select this license in the ArcGIS Desktop menu > Productivity > Licenses so that start and end dates and modification dates will update to reflect this license. Building and managing a map document document. Processing data for use by Business Analyst in a map document. Processing data for use by Business Analyst in a map document. You can process your data into a feature class and then use it in a map document. The data you process does not need to be local. You can create a data connection and select features using a web service. Depending on the system you are using, you will need to choose a connection type. When you create a data connection, the connection type you select determines how the features are processed. There are two types of connections: Streamed connections complete many feature requests in one process and have no predefined configuration. Proximity connections make request of the data once and are available for use in multiple processes. There are three proximity connections available: direct, order, and post. You can choose to use a direct proximity connection. You cannot choose to use an order or post proximity connection. Including a data connection in a map document. Processing data for use by Business Analyst in a map document. After you process your data in a table (for example, as an attribute table), you need to either save the map document as a document (a Word document, PPTX file, or PDF file) or create a map document using a data connection. Writing a map document. Writing the map document. Writing the map document. Writing the map document. Alternatively, you can use a data connection to process the data. After you create the document, you can add the map to it. You can add a map to the current document (preferably with no layers) or create a new document to hold the map and other layers. Creating a map document with layers.
