Francis Crick, although not a believer in the soul, spoke for the first time in public in 1989 and drew on the legacy of his father, the biologist and atheist John Maddox Crick, to defend his personal vision. Crick had begun his second career after being charged with manslaughter for injecting the fatal sodium amytal to an anaesthetised and paralyzed patient in 1953. Crick told his wife, Rosalind, that he was concerned about what would happen to his soul if he lost his mental faculties. Although his only formal religious education was at the Jesuit college, Malvern, in 1936, Crick has always included humanist philosophies in his interpretation of science. One of the most interesting sections in the book is Crick's rewriting of the personal credo he recited at Malvern. He revised his own words to suit the principles of the scientific method and the complexity of the brain. by GJ Evans *Astonishing Hypothesis Pdf 19 18* .
