Filecast is a reliable file transfer and sharing tool, designed to make the process of downloading files from the desktop to the mobile device easier than ever. The program allows you to easily generate QR codes that contain both the URL and the direct download link. Easy-to-use Filecast can easily generate a direct download URL for each file you select, as well as a specific QR code, containing both the URL and the direct download link. Once you select the file you want to transfer, Filecast can create a direct download URL for you, as well as a QR code, which is a direct path to downloading the file. The QR code and the direct download URL can

---

easily be selected and copied to clipboard, using the option in the Edit menu or the Ctrl+C hotkeys. When using a mobile device, you need to have a QR code scanner installed on it, otherwise, if using the PC, you require both the application and the scanning device. You can send the files directly to any user via the Internet or any other environment, even if the recipient has no QR code scanning device. Filecast is a cross-platform application, designed in Java, which does not require installation and can easily run from any computer or mobile device. The program supports sharing files and folders via its built-in webserver. Browser required for downloading Whether you run Filecast on a PC or a mobile device, you need an

---

Internet browser in order to access the files, due to the URL's structure. You may view the files or download them altogether, depending on whether the browser offers you this possibility. Moreover, you can even send folders through Filecast. Filecast provides the user with two options for creating QR codes: Option 1 – Convert the file The application can easily create QR codes for any file that is downloaded directly from the desktop to the mobile device, regardless of whether the file type is supported. The application scans the file, extracts the embedded URL, converts it to QR code format and creates a complete code that can be saved, sent or used as is. Option 2 – Generate QR code The application can be used to generate QR

---

codes for all the files stored on the desktop. The files can be selected individually or the entire folder can be selected. The application scans the file and extracts the embedded URL, then converts it to QR code format. The complete code is saved, sent or used as is. It can be used on Windows, Mac

By Reuters Turkey has rejected an international campaign to extradite a Muslim cleric who the U.S. government accuses of leading a terror network that has inspired deadly attacks on Western tourists in the past. An Istanbul court on Friday ordered the extradition of Fethullah Gulen to the United States,

---

where he faces trial on charges including murder and conspiracy in the shooting of three people at the U.S. Consulate in Turkey in 1998. “For many months now we have been trying to extradite this man on charges of terrorism,” Gulen said in a statement issued by his lawyer, Ismail Kasapoglu. “This order shows Turkey will remain with its principles.” The Turkish government says Gulen’s network of religious schools has infiltrated the police, the judiciary and the military and is behind an attempted coup in Turkey in 2016. Gulen denies all the charges. An Istanbul court’s ruling 1d6a3396d6

===== In this paper we have carried out a comprehensive study of the coherent vibrational motion of atoms trapped in a realistic model for an optical dipole trap. We have identified the

---

dominant modes of the trap as well as the quantum numbers of the eigenstates of the system. Then we have quantized the motion of the trapped atom and modeled the dissipation process using a master equation. We have obtained the equations of motion for the operators describing the collective modes and the population of the different levels due to the spontaneous emission of radiation. We have derived analytical expressions for the amplitudes of the electric field in the trap region and we have shown that they are in good agreement with the results of a numerical solution of the corresponding Maxwell equations. We have shown that the system can be thought of as a single two-level atom interacting with a damped harmonic

---

oscillator, the trap itself. We have solved the eigenvalue problem and obtained expressions for the energy of the trap as a function of the trapping parameters, which represent the position of the trap center as well as its frequency and quality factor. Furthermore, we have investigated the trapping mechanism and we have shown that the trapping can be divided into an initial (adiabatic) part and a final (nonadiabatic) part. In the former the trapping is carried out due to the atomic interaction, whereas in the latter it is due to the repulsive force of the charged electrodes. Finally, we have simulated the relaxation of an initially coherent atomic state using a master equation and we have shown that the system approaches an

---

equilibrium state, which is characterized by a finite occupation of the ground state and by a minimum value of the average energy of the system. We have found that the relaxation is slower than in the case of a single atom in a thermal environment and that it is especially slow if the trap frequency is low. The effect of the trap quality factor and the initial population of the ground state on the relaxation is also discussed. We emphasize that the present study was done in the high-temperature limit, so that the bath is considered to be initially in

between two computers or from the desktop to a mobile device. The program can easily generate a direct download URL for each file you select, as well as a specific QR code. Each of these codes are direct paths to downloading a particular file. Easy to use folder browser Filecast features a simplistic interface, with a split layout, designed to help you select the file and instantly view the codes. The area on the left displays the folder tree structure, with extendable nodes, which allows you to select any file stored on your machine. Once a file is selected, the QR code and the direct download URL are displayed in the area on the right. The URL can easily be selected and copied to clipboard, using the option in the Edit menu or the Ctrl+C

hotkeys. It can be sent to any user via the Internet or any other environment.

Scanning QR codes and acquiring files

Acquiring the files can be made in a very simple way: enter the URL into the browser of your choice or scan the QR code, for accurate data transfer. When using a mobile device, make sure that you have a QR code scanner installed on it. Otherwise, if using the PC, you require both the application and the scanning device. Filecast is a cross-platform application, being built in Java, which does not require installation and can easily run from any computer or mobile device.
