Bury Port ISO: Stand Off, but not at risk The Bury Port ISO has been declared safe by emergency services but could now face being hit with a US\$400,000 bill for the cost of the stand-off. Shortly after the stand-off, the fire service declared the incident to be "safe", but Bury Borough Council said it could be liable for the costs of a clean-up of the stricken location. The ISO was shut down on Tuesday, with a fireman placed on a stretcher after the truck of a crane operator fell into the machine. The incident happened at around 8.45am and was declared over at around 11.45am. This is the third time the facility has been shut down in the last three months, following an incident in September in which an engine was damaged and a crane's boom collapsed. Firefighters called in to the site of the incident in Car Street, Bury, are now working to minimise any damage to the surrounding area. There are now plans to close the adjacent Port of Europe and it could take a further day to clear debris and repair any damage. There is no danger to the public, but vehicles have been blocked off to prevent anyone from entering the Port. "The scene is secure, with fire and rescue services having finished at the site," said a statement from Bury Borough Council. "Fire and rescue services will continue to monitor the situation and any potential health and safety issues are being assessed." (video: 1:08 min.) **Caveat:** AutoCAD is not a print design tool. Creating high-resolution, professional-quality documents that support integration with other software and can be used in print shops and other publishing centers requires using a print design tool like Adobe Illustrator or InDesign. AutoCAD is a drafting and technical drawing application. For more information about AutoCAD and the 2019 version, visit www.autodesk.com/products/autocad. A new study has found that couples who say they have "open-relationships" are more likely to break up than those who are "monogamous." The study, published in the journal *Science*, analyzed data from nearly 700,000 people who were part of an online survey conducted by the American Association for Marriage and Family Therapy. The survey was conducted by Statistic Brain, a company that offers online surveys and marketing services for companies. According to the study, 50 percent of the couples who said they had open-relationships were no longer together after two years. On the other hand, 69 percent of the couples who were not in open-relationships said they were still together after two years. "Open relationships are still relatively rare, but they have surged in popularity," said Lauren Stratford, one of the study's authors and the president of Statistic Brain. "It has been a mistake to think about these relationships as different from 'regular' relationships. There is not a scientific research base to understand them." "We should know that open relationships are a new relationship type, that they can change when people go into them, and that most people who enter them are happier when they leave them," Stratford added. People who have been in open-relationships tend to have more positive views about their relationships. For example, people in open-relationships are more likely to report being happier in their marriages than those in monogamous relationships. More couples in open-relationships reported a feeling of "comfortable pressure" to have open-relationships. Most of these couples reported that their experiences in open-relationships were more positive than negative. getName
