Using Photoshop on Windows When Photoshop debuted, it was a 16-bit, unmanaged application, meaning that it could be operated by no other application. The primary Photoshop application on Windows is 32-bit and supported on both 32-bit and 64-bit operating systems. Photoshop can also be controlled by a host of other applications, including Microsoft Office for Windows and some professional CAD applications. It's rare that Photoshop isn't the primary application for an entire production, and this can be a benefit. As long as Photoshop is installed, you can operate it on a host of different platforms. Photoshop is a featured program that comes with Windows, and it's controlled through the menu bar in the top-left of the software. Figure 9-2 shows the Photoshop menu bar from a 32-bit operating system. Figure 9-2: Photoshop has options on both 32-bit and 64-bit operating systems.

Photoshop Edit Start Photoshop Elements and click "File". The "New" option is under the "File" menu. You can also click the "New" button in the top-left corner of the app. In the New window you should see two tabs. The left one is titled "Photo". To create images, click on this tab and then choose "Edit Images" from the menu below it. You now have two options to edit the images. You can click "Select" or the "Open" button. If you select images for editing, you can either go to them by navigating using the "Go To" button at the bottom of the menu or by clicking the image in the "Photos" area. Alternatively, click the "Open" button. You should see a small, white window on the left side of the "Image" window, underneath it. You can then click "OK". You should now see the image in the "Photo" tab. This is your starting point. Below it are four menu tabs: Adjustments, Doodles, Apply and Enhance. You can adjust the image in the Adjustments menu by sliding your mouse along the different buttons. You can find the different buttons on the left side of the Adjustments menu. You should now notice the Doodles area on the right side of the image. You can draw any image or text in this area. There are a number of tools here for you to use. Most of them are similar to those in Photoshop, but with different icons. You can draw text using the Pen tool to write or highlight text. You can also change the color of selected text using the Color Picker. You can add a drop shadow (shadow) to your text using the Shadow tool. You can change the color of your text by double-clicking on it with the Pen tool. You can also draw with the Brush tool. You can use it to draw a line or add a line to your picture. To do this, click on the top left of the Brush tool until the icon switches to a different color. You can also add a color gradient to your picture. Click on the tool icon and then select a color from the color palette on the right of the 05a79cecff

What's New in the?

GLOUCESTER COUNTY, Md. (WWSB) - Students around the country will be heading back to school this week and many of them will be clutching a bag full of high-powered learning tools. "Scholarship Opportunities for College and Career Success" a program from the President's Council on Youth Development found that students can save \$30,000 by enrolling in one of over 65,000 scholarships available nationwide. Some of those opportunities are just minutes away and there's no need to leave your bed or slip out of the house to apply. "A lot of kids don't even know that they have the opportunity to get scholarships throughout the year, throughout the day," Laura Corbin of the Eastern Shore says. "There's so many great organizations. They offer support to your school. They offer support for your community so it's very important to get out there and get involved in the community." Scholarship applications are easily available online at scholarships.gov. You can request a tuition credit card application form at most financial services. The application is very simple.

Q: How to add single-dimensional array to multidimensional array? I want to add single-dimensional array to multidimensional array. I'm able to add multidimensional array to a single-dimensional array but unable to add single-dimensional array to multidimensional array. I've tried the following code.

```
$values = array_fill(0, 3, rand(0, 100)); // 2-dimensional array
$values2 = $values; // equal to 2-dimensional array
$values3 = array(); // new array to be added while(count($values2)) { $values3[] = array($values2); unset($values2[0]); }
print_r(array_values($values3)); // Generates this result
print_r($values2); // Contains [0] as key
While the output of $values2 at the end is
